### **Wolf Technical Services, Inc. improves safety in fixed wing and rotary aircraft**

Indianapolis, IN. – Wolf Technical Services, Inc. announced that it has been awarded a \$750,000 contract for a new military project.

The contract, issued by the U.S. Air Force Research Lab (AFRL) at Wright Patterson Air Force Base, enables Wolf to develop a light-weight troop seat to reduce injury and increase survivability for troops while being transported in fixed and rotary wing aircraft. Wolf's troop seats apply energy-absorbing technology designed and evaluated under a previous U.S. Air Force contract. The contract will provide \$750,000 in funding for development and manufacture of a prototype for the next-generation troop seating.

Wolf's President Michael Pepe said the new troop seat can also be installed in any U.S. or allied transport aircraft to reduce injury to troops in the event of an aircraft mishap or combat hazard.

"It's going to keep our troops safer," said Pepe.

Wolf's system uses two independent and light-weight energy-absorbing technologies that work together to absorb impact energy while compensating for occupant weight, including the added weight of combat gear and special equipment.

This contract is one of several military awards Wolf has received within the last couple of years.

We have spent years developing energy-absorbing technology for aircrew protection applications and this program is a natural extension of that work," said Stuart Nighthenheler, Wolf's Vice President of Advanced Programs. "Our seating technology will represent a marked improvement in the safety of our nation's troops."

Wolf Technical Services, Inc. is an engineering company with more than 30 years of experience. One facet of our operations is devoted exclusively to improving military safety for all military personnel through cutting-edge technology. Wolf strives to provide unsurpassable stewardship and cooperative strategies to save our customers both time and money.
